System 3000
Quick Payment option

Over the years the default payment option for most customers has change from 80% cash to 50% cash and 50% EFT-POS.
To meet this Way Forward Technologies Limited introduced Quick Payment as a selectable option.

To activate, you need version 6.03.18 or later Remote Module (Weighbridge module).

Configuration change
Edit System 3000.ini and add the following:

In the [APPEARANCE] section add
QuickPayment=True

When Read Scale is pressed a new screen appears.

This shows the payment options available to the operator. At the current time.
In the above example Charles is an Account Commercial therefore there are four payment options for selection.

Simply select the payment method by clicking the option.
If Payment changes simply press Read Scale again and reselect the payment method.
